# DIGITAL PRINTING

Digital Printing is a technology that, in the last few years, have taken more and more foot in the process of printing, thanks also to the remarkable technological advances introduced with the evolution of electronics, to the basis of this technology.

Today's digital printers are able to offer a chromatic rendering and quality of high-level printing, which become competitive compared to traditional printing techniques,

especially during prototyping or small series, due to plant costs content and quick run-times. Digital printing allows to realize various types of work: from posters to labels, from prints on objects to panels advertising, from prints on fabric to plates. It is possible to print in 4-color mode plus white at high resolution, on a variety of supports such as: polyester, polycarbonate, cardboard, forex, pvc, glass, fabric, eco-leather.
